## EXPERIMENT-1.3(a)

### 1. Aim/Overview of the practical:

To demonstrate the concept of Linked List.

### 2. Task to be done/ Which logistics used:

<https://www.hackerrank.com/challenges/compare-two-linked-lists/problem?isFullScreen=true>

You're given the pointer to the head nodes of two linked lists. Compare the data in the nodes of the linked lists to check if they are equal. If all data attributes are equal and the lists are the same length, return . Otherwise, return .

### 3. Steps for experiment/practical/Code:

```
bool compare_lists(SinglyLinkedListNode* head1, SinglyLinkedListNode* head2) {
while(head1!=nullptr && head2!=nullptr && head1->data==head2->data )
{
    head1=head1->next;
head2=head2->next;
}
if(head1==head2)
{
    return 1;
}
```

```
}  
else {  
    return 0;  
} }
```

#### 4. Result/Output/Writing Summary:

### Congratulations!

You have passed the sample test cases. Click the submit button to run your code against all the test cases.

#### ✓ Sample Test case 0

#### ✓ Sample Test case 1

## EXPERIMENT-1.3(b)

### 1.Aim/Overview of the practical:

To demonstrate the concept of Linked List.

### 2. Task to be done/ Which logistics used:

<https://www.hackerrank.com/challenges/insert-a-node-into-a-sorted-doubly-linked-list/problem?isFullScreen=true>

Given a reference to the head of a doubly-linked list and an integer, , create a new *DoublyLinkedListNode* object having data value and insert it at the proper location to maintain the sort.

### 3. Steps for experiment/practical/Code:

```
DoublyLinkedListNode* sortedInsert(DoublyLinkedListNode* llist, int data) {
DoublyLinkedListNode *temp=llist;    if(llist->data>data){        llist-
>prev=new DoublyLinkedListNode(data);        llist->prev->next=llist;
llist->prev->prev=NULL;        llist=llist->prev;        return llist;
    }
    while(temp->next!=NULL){        if(temp->next-
>data>=data){
        DoublyLinkedListNode *temp1=temp->next;
temp->next=new DoublyLinkedListNode(data);
temp->next->next=temp1;        temp->next-
>prev=temp;        temp->next->next->prev=temp-
>next;        return llist;
    }
    temp=temp->next;
}
temp->next=new DoublyLinkedListNode(data);
temp->next->prev=temp;    return llist;
}
```

### 4. Result/Output/Writing Summary:

## Congratulations!

You have passed the sample test cases. Click the submit button to run your code against all the test cases.

```

### Learning outcomes (What I have learnt):

1. Through this experiment I learn concepts of linked list.
2. different operations on doubly linked list.
3. Learned about insertion in linked list.

### Evaluation Grid (To be created as per the SOP and Assessment guidelines by the faculty):

Sr. No.	Parameters	Marks Obtained	Maximum Marks
